Product(s)	Language Tune-Up Kit	Various..	Intuipath	Cogmed JM, RM, QM
Brief Synopsis:	This interactive reading software is for ages 6 to adult who currently read at grade levels 0-4. It is based on the Orton-Gillingham principles to help those with reading difficulties.	The Read Naturally strategy combines teacher modeling, repeated reading, assessment and progress monitoring to accelerate the improvement of fluency and comprehension. Dr. Sally Shaywitz in her book, <i>Overcoming Dyslexia</i> strongly recommended Read Naturally for students who struggle with dyslexia.	The Intuipath double finger labyrinth design stimulates both sides of the brain simultaneously, thereby pairing reasoning, problem solving and language skills (left hemisphere) with intuition and creativity (right hemisphere). This effect, known as Brain Synchrony, creates a preponderance of alpha and theta brainwave states, leading to enhanced mental relaxation. and greater adaptive responses as well as enhanced intra-personal and interpersonal communication.	Cogmed Working Memory Training is built around three age-specific software applications. Each is proven to improve working memory, attention and strengthen executive functions. The effects of Cogmed have been shown in placebo controlled peer review studies, 80% of users see tangible benefits.

Product(s)	Captain's Log	Brain Fitness	InSight	iLs Program
Brief Synopsis:	Captain's Log includes 50 multi-level programs that are fun, challenging, brain training exercises that motivate clients while stimulating the areas of the brain that are responsible for cognitive abilities – attention, impulse control, memory, conceptual reasoning, visual and auditory processing, and more.	The Brain Fitness Program features six computer-based exercises that speed up and sharpen how the brain processes and remembers sounds in order to keep up with and pick up more detail in conversations and sound-rich settings.	InSight features five computer-based exercises that speed up and sharpen how the brain processes and remembers visual information to help speed up response time to detailed vision-rich tasks.	iLs combines the most technologically advanced sound therapy with specific movement activities; the goal is to 'exercise' the auditory, visual and vestibular (balance) systems simultaneously, improving mental and physical abilities, as well as self-confidence.

Product(s)	Interactive Metronome	Time4Learning	Senex	AttenFocus AttenMemory
Brief Synopsis:	IM is a neuro-motor assessment & treatment tool used in therapy to improve the neurological processes of motor planning and sequencing. The IM program provides a structured, goal-oriented process that challenges the patient to synchronize a range of hand and foot exercises to a precise computer-generated reference tone heard through headphones. The system provides immediate feedback measured in milliseconds, and a score is provided.	Time4Learning is a convenient, online education program that combines learning with fun educational teaching games that allows students to proceed at their own pace. Multimedia lessons are followed by interactive lessons, printable worksheets, and assessments to assure student's mastery. Curriculum covers PreK to 8th grade for math, algebra, language arts, phonics and grammar and includes science for grades 1-6 and social studies for grades 2-7.	The SenEx system uses Sensory & Motor stimulation on a table in specific timing patterns to create a sensory neuro association program to train the nervous system with multiple types of sensory stimuli including; light, sound, motion and tactile stimulation that is necessary for the brain to focus, attend, expand and learn!	AttenGo is a web-based clinically tested software that uses innovative neuro-cognitive training to improve attention, concentration, focus and reduce memory loss associated with ADD, ADHD, & learning disabilities (LD). It also helps improve reading, writing, listening & general learning. AttenGo works by improving the brain's self-regulation & frontal lobe function as well as key cognitive skills such as executive functions & working memory, resulting in long-term enhancement of cognitive skills.

Product(s)	Fast ForWord	AIT	Enlisten	Sensory Learning
Brief Synopsis:	The Fast ForWord program develops brain processing efficiency through intensive, adaptive exercises that develops and strengthens memory, attention, processing rate, and sequencing—the cognitive skills essential for learning and reading success.	Auditory Integration Training (AIT) rehabilitates disorders of the auditory system, such as hearing loss or hearing distortion which contributeS to behavioral or learning disorders. AIT uses filtered and modulated music to help stimulate the audiological and neurological systems to normalize the senses. Improvements are seen in focus, attention and ability to concentrate more easily.	We work to improve how the ear and brain work for people who have motor, language, social, and cognitive difficulties. Because the ear stimulates 85% of the brain, improving the processing has holistic improvements. We consider diagnoses such as Speech and language delay, Motor delay, Autism, Sensory Integration Dysfunction, Dyslexia, ADHD, Cerebral Palsy, Brain Trauma from accident or illness, and the effect of ear infections with children under 2 – 3 years old when creating a program.	The Sensory Learning Program is a supra-modal approach to developmental learning that unites three modalities (auditory, visual and vestibular) into one 30-day drug-free intervention to improve perception, understanding, and the ability to learn.

Product(s)	Various	Empowered Learning	Visual Skills Training	ThinkRx
Brief Synopsis:	Lindamood-Bell Learning Processes is an organization dedicated to helping children and adults learn to their potential. Lindamood-Bell's research-based instruction teaches reading, language comprehension, and math, and is especially successful with children previously diagnosed with dyslexia, hyperlexia, and autism spectrum disorders.	We help our clients learn to process information in a format that matches their natural processing functions. These "brain-based" techniques are designed to help our client's with the mastery of spelling, reading, math, foreign language, and to develop superior memory abilities. When using these techniques our clients learn to quickly organize information systematically.	Gemstone offers internet-based programs to assess and improve visual skills. ConvergEyes(c) and Dynamic Vision Training (c) exercise the eyes' focusing muscles, force the eyes to team together to see particular images, and exercise the sensorimotor pathways that are necessary for good reading eye movements, or "tracking". Purchases are tax-deductible, with proceeds supporting research and service projects.	ThinkRx is LearningRx's flagship program, a fully integrated system of drills and training exercises that are delivered in an intense, one-on-one environment, and are designed to attack and rapidly correct weak or underdeveloped cognitive learning skills. It does not teach academic subject matter; rather, it trains the underlying cognitive skills required to learn efficiently and effectively.

	Advanced Brain Technologies (ABT) is a neurotechnology company that develops and distributes interactive software and music-based programs for the improvement of memory, attention, listening, academic skills, sensory processing, brain health and more. BrainBuilder® is the brain fitness program that improves memory and attention, sharpens focus and thinking, and improves visual & auditory processing & sequencing. Train your brain with over 20 fun and diverse visual, auditory & focus exercises..	The Lexia Cross-Trainer Suite is designed to improve cognitive development in learners ages 7 to adult. The software helps learning disabled, special needs, and mainstream students strengthen their thinking, memory, and problem-solving abilities, improving performance across subjects as varied as reading, math, science, and social studies.	Audiblox is a unique developmental program, aimed at the inculcation of basic skills, which are necessary for school entry, for sustained achievement at school, and to overcome learning disabilities. Audiblox sharpens attention and concentration, develops accurate perception, improves memory, promotes logical thinking, and improves reading, spelling, handwriting and math.	Earobics directly impacts reading achievement in pre-K through third grade. Earobics' unique instructional software design provides a diverse, differentiated approach to literacy suited to each student's individual needs. Each level is specially developed to help students build critical literacy skills, including recognizing and blending sounds, rhyming, and discriminating phonemes within words.

Product(s)	PaceWare	Brain Gym	Brain Skills LLC	Multiple
Brief Synopsis:	Pace Learning Systems' Accelerated Learning Lab provides a powerful success model for the at-risk learner. Focused on helping students learn through success, these are prescriptive, interactive, and highly effective programs that meet each student's individual needs and encourage steady progress. It is a system for middle and high school students, as well as adults. The program teaches reading, language, spelling, writing, mathematics, science and social studies.	Brain Gym includes 26 easy and enjoyable targeted activities that integrate body and mind to bring about rapid and often dramatic improvements in: concentration, memory, reading, writing, organizing, listening, physical coordination, and more. Brain Gym develops the brain's neural pathways the way nature does – through movement.	BrainSkills is a brain-training online program for enhancing mental skills – both learning and processing capabilities. BrainSkills makes learning or work easier and faster because it builds underlying learning skills to give you better tools to help you function far more effectively at school, at work, at play, or all three.	SOI Systems addresses learning problems due to intellectual abilities weaknesses. The system includes assessment of 24 foundational learning abilities, and over 200 units of remediation in the form of personalized workbooks and computer modules based on the analysis of a client's assessment results. SOI-IPP Centers offer clients a broad range of treatment in the areas of sensory-integration, visual and auditory processing, development of learning abilities, and improvement of conceptual frameworks.

Product(s)	Play Attention	Samonas Auditory Intervention	PSSCogReHab
	Brief Synopsis: Play Attention (PA) is a computer-based training system supervised by trained specialists who provide full family support. The PA software includes exercises that improve attention, short-term memory, organization, time on-task, and filtering out distractions. A sensor lined helmet allows the wearer to control the computer by attention alone much like Harry Potter! Attention becomes concrete and controllable while students sharpen how cognitive skills that improve performance at school and work.	Samonas is an individualized sound therapy program that combines the essential elements of music, sound and science in specialized recordings. Through 20 years of research Ingo Steinbach developed a system offering solutions for learning disabilities, attention deficit / hyperactivity, speech & language, communication, memory & information processing, focusing & organization, spatial & bilateral organization, task management, motivation, ... adapted to the personal needs of your clients!	Computerized therapy tasks, most of which contain User modifiable parameters that extend the utility of each program to fit nearly any requirement presented by your patient or student. The focus of the individual exercises extends from simple attention and executive skills, through multiple avenues and modalities of visuospatial and memory skills all the way up to, from simple to extremely complex, problem solving skills.

Product(s)	emWave PSR	CNS Vital Signs	MindFit	Various
Brief Synopsis:	HeartMath's emWave technology products are used to help people learn internal awareness, self-regulation and emotional management skills. To education and help prevent stress by becoming aware of when the stress response starts and stopping it in the moment.	NS Vital Signs offers several helpful tools for learning and attentional issues: 1) a CORE Neurocognitive Assessment tool that measures a range of neurocognitive functions; (2) 30+ behavior rating scales to help identify symptoms and comorbidities. CNS Vital Signs autoscored reports can add insight and validity to your evaluation and management activities. Free software and 5 complimentary test sessions may be downloaded on our website.	MindFit™ presents entertaining mind exercises scientifically developed to sharpen cognitive skills. It gives a great workout to a range of abilities such as: visual search, time estimation, short term memory, spatial orientation, reaction time, hand-eye coordination - to name only a few. Its patented Individualized Training System (ITS) customizes the workout program to each individual user.	Using a variety of tools, we identify the areas of the brain that are functioning optimally, where improvements can be made, and which tools will produce the greatest benefit to the patient. Treatments include Retained Primitive Reflex Integration, Clinical Nutrition, Interactive Metronome Training, Cranial Therapies, Chiropractic care, and home exercises. With this approach we are able help the parts of the brain that are lagging behind and turn on the parts that are off.

Product(s)	Brain Train	Happy Neuron	Teach Town Basics	ExerLearning
Brief Synopsis:	Cognitive Labs is a lab for your brain, creating scientific brain games, and having administered over 50 million tests to date. It's free to everyone over the internet. Subscribe to a game feed (RSS) or request a module for your Google home page so you can take a daily test.	The HAPPYneuron program comprises more than 35 games that strengthen the five major cognitive brain functions of memory, attention, language, executive function, and visual and spatial skills. Attention, memorization techniques, processing speed, visual memory, abstract critical thinking, visuo-spatial orientation may all improve over time, depending what cognitive function is targeted.	A new evidence-based treatment alternative for children with autism spectrum disorders. TeachTown: Basics is a subscription service designed for children with a developmental age of 2-7 years. The program maximizes the child's motivation using: Self-Adjusting Program, Stimulating Reinforcers and Child Choice.	ExerLearning® combines movement, balance, fitness factors delivered by existing computer software games. You can increase your students' fitness while simultaneously increasing their academic success. Generation FIT™ is a student-led game technology program that delivers ExerLearning outcomes. Footgaming uses a computer peripheral, the FootPOWR, to add activity, balance, eye-tracking, cross lateral movement and more (grades 3-12)

Product(s)	EFSAP	The Listening Program	Pace Basics
	Brief Synopsis: EFSAP (Establishing Foundational Skills for Academic Proficiency) is a pre learning program for 3-5 years-olds & a Kit for small groups & classroom program. This program enables children to have all their foundational learning skills in place for academic studies including open air sound therapy; cognitive exercises for visual and auditory focus, concentration and logical thinking; physical exercises and color, line, shapes, symbols, counting, simple math, social skills, and memorization.	The Listening Program® is a music-based listening therapy that provides brain stimulation to improve performance in school, work, and life. Systematic training is provided through simply listening to specially modified classical music that trains the brain to process sound more efficiently. Children, teens, adults and seniors can use the program in the home, classroom or workplace. Completely portable and easy to use, it fits easily into anyone's schedule and only requires 15 to 30 minutes of daily listening.	A thorough developmental literacy program to teach reading, language and math literacy for non-and low-level learners. This program begins with symbols and letter discrimination and continues to a fifth grade functional level.
